

PRABHDEEP SINGH BATTH

Senior Software Engineer | Full-Stack Developer | Systems Architecture

Whitby, ON | prabh070@gmail.com | linkedin.com/in/prabh62 | github.com/prabh-62 | prabh-62.github.io

SUMMARY

Senior software engineer with 9+ years building and modernizing enterprise .NET and cloud systems. Most recently shipped a production RAG platform — Azure AI Search, .NET 9, React 19 — for a multi-tenant property management product; previously architected distributed microservices on AWS and delivered an end-to-end document automation product for the trucking industry. Comfortable owning a system from architecture through production and monitoring, and bridging product and engineering.

SKILLS

Languages & Frameworks: C#, .NET, ASP.NET Core, EF Core, TypeScript, React, Angular

Cloud & Infrastructure: AWS (Lambda, SQS, SNS, App Runner, EKS, CloudFront, CDK), Azure (AI Search, Functions, Event Grid, Blob Storage), Docker, Azure DevOps CI/CD

Data & AI: MSSQL, SQL performance tuning, Redis, vector search & embeddings, RAG pipelines, Microsoft Foundry, LLM integration

Architecture & Practices: Distributed systems design, event-driven architecture, microservices, REST APIs, Infrastructure as Code, code review, technical mentoring

EXPERIENCE

Senior Software Developer — Condo Control (Property Control)

08/2024 - 08/2026

Toronto, ON — Hybrid

- Built and shipped the product's RAG chat platform end to end: a React 19 interface on Vercel AI Elements backed by a .NET 9 API that runs parallel vector searches across Azure AI Search and composes cited answers from the top-ranked chunks.
- Closed a silent-failure gap in ingestion where password-protected and macro-enabled files were skipped without any signal: roughly 3,000 of 27,000 documents across nearly 200 tenants were invisible to search, so customers received confident answers that omitted their own files. Built an event-driven status pipeline — knowledge store projections, Event Grid, Azure Function, REST API, SQL — giving every document a durable, queryable index status per tenant.
- Accelerated the ASP.NET MVC to React 19 migration using shadcn/ui and AI-assisted development in Cursor.

Software Architect — Transflo

10/2022 - 07/2024

Tampa, FL — Remote

- Architected and delivered Workflow AI, an end-to-end document automation product for trucking carriers: paperwork from mobile, email and scanning stations runs through an OCR pipeline over HTTP, returns via AWS SQS to .NET Lambda handlers that flag discrepancies for back-office review, and surfaces in an Angular front end over a .NET BFF.
- Led the distributed microservices architecture: domain events over SQS and SNS, Lambda, App Runner, Redis caching, and a CloudFront/S3 front end I proposed.
- Hired and onboarded six offshore engineers, cutting pull-request review cycles from roughly five rounds to near zero by front-loading codebase context into ticket handoffs.
- Consolidated frontend and backend repositories into a git monorepo, saving hundreds of developer hours, and moved production deployments onto AWS CDK infrastructure as code.

Senior Software Engineer — Transflo

10/2020 - 10/2022

Tampa, FL — Remote

- Built the Transflo OnePortal Angular app shell on shared monorepo libraries, giving every portal UI one look and single sign-on.
- Built and maintained Azure DevOps CI/CD pipelines, sharing reusable build and release steps across products via task groups.

Software Engineer — Microdea

05/2017 - 10/2020

Markham, ON

- Designed and maintained multiple ASP.NET Core Web APIs and Angular front ends underpinning business-critical document management products, sharing code across projects through TypeScript libraries.
- Cut hundreds of implementation hours by introducing tunneling software to expose on-premise client web services.
- Avoided more than \$200,000 in Oracle licensing costs by migrating a legacy Java UI to IcedTea-Web.

EDUCATION

Computer Software Engineering — Sheridan Institute of Technology and Advanced Learning, Toronto, ON

09/2013 - 04/2017
